

The Unbelievable school

Many different '**unbelievable**' educational capabilities are offered to our students.

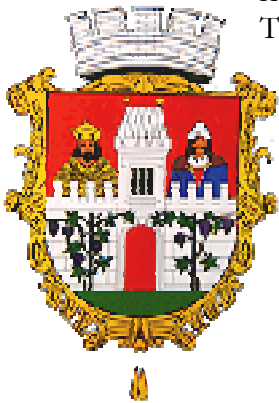

Every student learns English combined with one of these languages: German, French, and Spanish. The first-graders and second-graders can learn English in special courses like English through Games club and older children can attend a Drama club, for instance. The similar situation exists in other languages, too.

They even use interactive whiteboard for their creative writing and drawing.

The Nice school

In a nice historical quarter of Prague called Žižkov, almost in the centre of the capital of the Czech Republic, there is an eighty-five years old building with four floors. The passer-by cannot overlook its noble appearance. It is evident that this building is devoted to the special purposes like teaching and learning.

There are 45 qualified and skilled teachers and 700 diligent and hard-working students. Hot tasty lunches are served for all student in our school canteen.

The Innovating school

The 'innovating' school JLS has been officially entitled by the Czech Ministry of Education to give seminars on introduction of **multimedia** and IWB to the educational process. **Microsoft** awarded our courses as the best Czech solution in program "Partners in Learning." We are certified centre for teacher training and more than 400 teachers and principals proved their skills in our courses. Seven interactive showrooms have been widely used by our teachers and so we produce our own learning elements which you can find on **www.at-school.org**.

This portal was included into 100 best e-learning European solutions. Interactive board is only a tool. The main change must be born in teacher's and principal's minds. Knowledge is a spark to ignite this process. If this portal was the starter and gave you some ideas, we would be really proud.

Don't hesitate to cooperate with us.

The Quality in our school

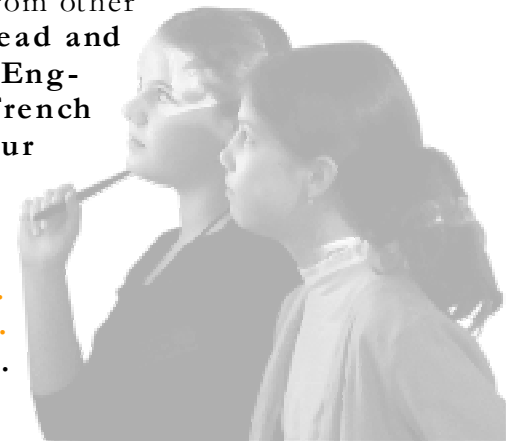

Students are stimulated to improve themselves in self-study as well as teachers who are provided with non-standard possibilities of personal education and development.

Our students (99%) are successful in their secondary and university studies and independent analysis proved that their level of skills and knowledge is outstanding. We participate in autoevaluation programs as well as the international evaluation analysis as PISA and others.

The Useful school

As it is obvious from the title of this school our students leave our school with a very good knowledge of languages and e-literacy that help them very much in the world based on information systems and bring them significant advantage towards students from other schools. **Read and comment English and French blogs of our students on**

<http://blogs.ecml.at/>

The European & world school

Participation in various European projects is a pleasure for pupils and teachers as well because we want to live in Europe, in peace and co-operation. At present time, our

school has various partner schools throughout Europe (Denmark, Norway, Finland, and Spain). We also co-operate closely thanks to e-learning applications

of Microsoft Classserver as well as we administer portal <http://skoly-unesco.cz/> as a home service for all Czech schools participated in ASP UNESCO. Our school can be also found as a frequent contributor to the SPRING DAY, SOCRATES and other international activities. Full list can be found on www.lupacovka.cz.
